

morphogenesis

from the artichoke

The building will integrate different programs, the same way it happens in the social context, and The Plaza will be the place where this programs converge. This Plaza is the starting point; the building, its outline and the circle are the geometry that allows an homogeneous perimeter. The different programs will generate in the centre, weaving with each other towards the exterior. Linear uses, transversal relations. Generating the circle from tangencies.

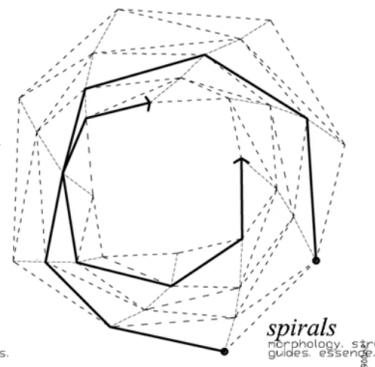

tangencies circle
sum of spirals
circle as the sum of spirals, protect the interior, go smoothly, transversalities avoid.

intersections
points for mainstreaming, contact situations, none fixed.

roads
directions, lines of movement, use sites, independent space.

spirals
morphology, structure guides, essence.

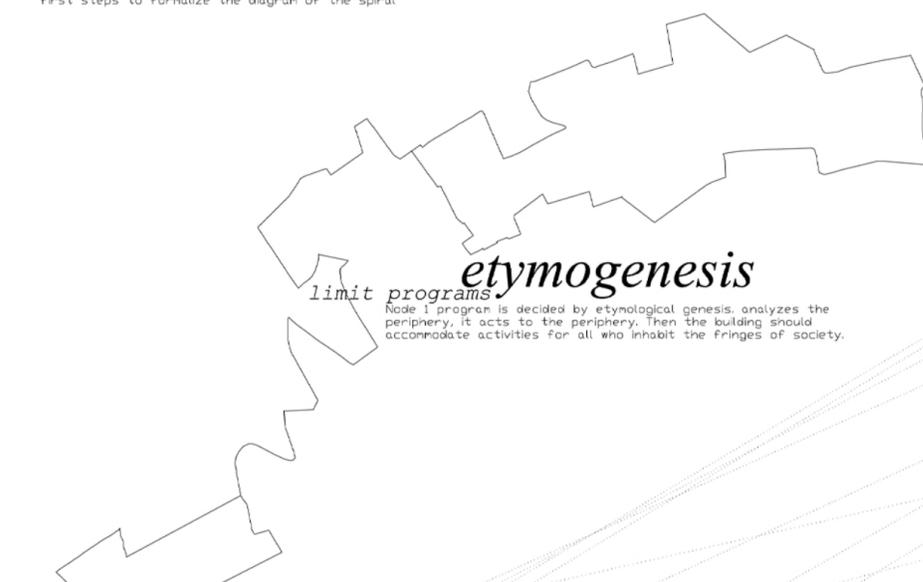

spiral bindings
edit the graphic
first steps to formalize the diagram of the spiral

social lab

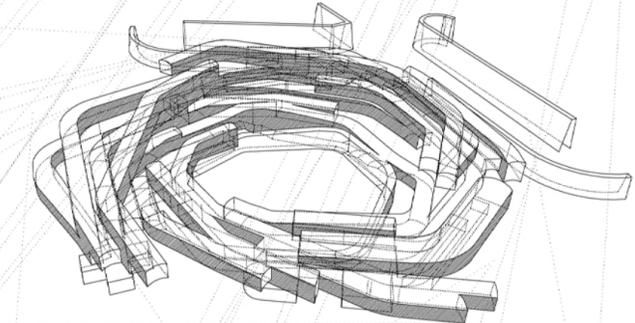

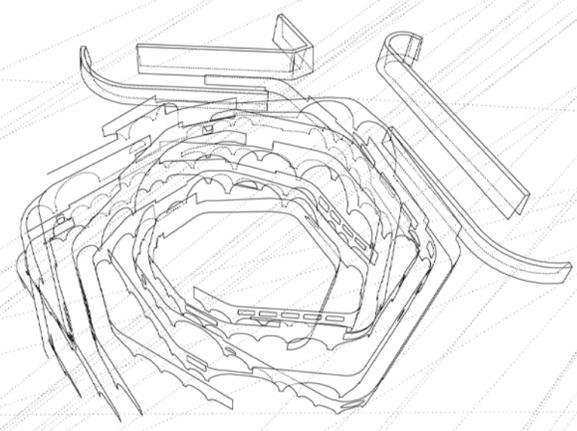

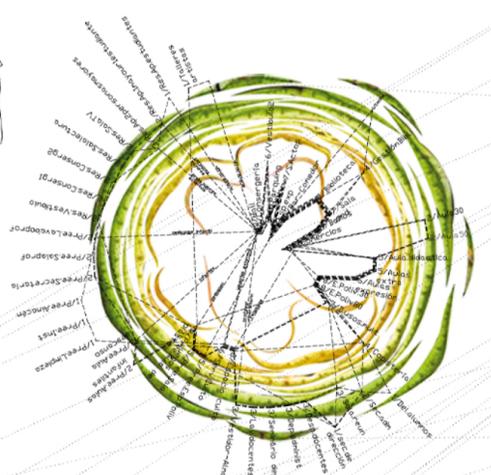

or peripheral center
The Social Lab brings together social peripherals, who are not part of most common changes in the same space. Born from the University of Social Services to expand its program to all activities that orbit around the university studies. Then join a Public Reading Room, Civic Center, a supervised residence for the Elderly, a kindergarten and a place of worship that aims to bring newcomers beyond.

inch to inch
scale tactics
Needed to counter the large size of the building. The first decisions relate to human scale. The minimum size of each action, in each place. For the association of all is not lost the identity of each. The building addition. Between the reduction in the minimum space and position of open spaces such as auditoriums irreducible below deck allows the building to remain small as possible to human size, to inch and inch measurements.

limit programs
etymogenesis
Node 1 program is decided by etymological genesis, analyzes the periphery, it acts to the periphery, then the building should accommodate activities for all who inhabit the Fringes of society.
