

ANÀLISI PÒRTIC 1 (ENCAVALLADA)

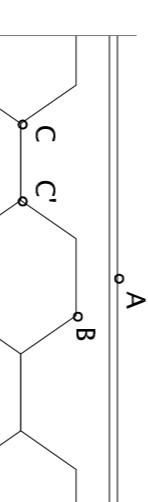

Centrallínxia ja aplicada.
Deformació màxima = 3,1 cm. --> Compleix.

ANÀLISI PÒRTIC 2 (BOIT)

A les bigues boits s'ha de realitzar les següents comprovacions:

1. Comprovació de flexió. Comprobat abans, compleix.
2. Comprovació tensional al punt A.

$$\sigma_a^* = M_a^* \leq \sigma_u$$

$$M_a^* \sim M^* \text{max.}$$

$$W = 0.00351 \text{ cm}^3, \quad \sigma_a = 550 / 0.003512 = 1556 \text{ kg/cm}^2 < 2600 \text{ kg/cm}^2, \quad \rightarrow \text{Correcte.}$$

3. Comprovació tensional al punt B. En aquest cas, s'haurà de comprovar a diferents punts ja que el moment i el tallant van variant segons la posició de cada forat.

$$\sigma_B^* = \sigma_a^* \times h_a / h_t + (Q^* \times P_f) / (12 W_C) \leq \sigma_u$$

$$W_a = 550 \text{ mm}, \quad \sigma_a = 550 / 0.003512 = 1556 \text{ kg/cm}^2 < 2600 \text{ kg/cm}^2, \quad \rightarrow \text{Correcte.}$$
