

# Models and Algorithms for Location-Routing and Related Problems

Maria Albareda Sambola

## **Thesis Codirected by**

Elena Fernández Aréizaga  
Gilbert Laporte

UNIVERSITAT POLITÈCNICA DE CATALUNYA

March 2003

# Acknowledgments

Along the development of this thesis I've had the pleasure of working with some researchers from whom I learnt a lot. I am specially grateful to Elena Fernández for her constant support and her friendship, and to Gilbert Laporte for his support and his trust that gave me the opportunity to do part of this work in excellent conditions. I also want to thank Juan A. Díaz and Maarten van der Vlerk; working with them was a great pleasure for me.

Most of this work was developed in the *Departament d'Estadística i Investigació Operativa* of the *Universitat Politècnica de Catalunya*. I want to thank the department and all its members for all the facilities and help I found here. During my stays in the Research Institute *Systems, Organization and Management* of the *Rijksuniversiteit of Groningen*, and in the *Centre de Recherche sur les Transports* I was provided with all what I needed to feel at home and I am very grateful for this.

I also want to thank the *Ministerio de Educación y Cultura* of the spanish government (grant AP9743739460), the *Comisión Interministerial de Ciencia y Tecnología* (grant TIC 2000-1750-006-03) and the *Chaire de Recherche du Canada en Distributique* for their financial support.

Last but not least, I want to express my gratitude to my family and my friends for their unconditional support.

# Contents

<b>1 State of the Art</b>	<b>5</b>
1.1 Combinatorial Optimization . . . . .	5
1.2 Stochastic Programming . . . . .	7
1.3 Some Subproblems of Location Routing Problems . . . . .	8
1.4 Location Routing Problems . . . . .	10
<b>2 The Deterministic Location-Routing Problem</b>	<b>13</b>
2.1 A compact model . . . . .	14
2.2 Tabu Search Heuristic . . . . .	18
2.3 Lower Bound for the Location-Routing Problem . . . . .	24
2.4 Computational Results . . . . .	25
2.5 Conclusions . . . . .	33
<b>3 Column Generation Approach for the Location-Routing Problem</b>	<b>35</b>
3.1 Formulation . . . . .	36
3.2 The Pricing Problem . . . . .	38
3.3 Algorithm Structure . . . . .	40
3.4 Computational Results . . . . .	41
3.5 Conclusions . . . . .	42
<b>4 Stochastic Generalized Assignment Problem</b>	<b>45</b>
4.1 Problem description and modeling . . . . .	47
4.2 Heuristic Solutions for the Stochastic Generalized Assignment Problem . . . . .	51
4.3 Exact Algorithm Variants . . . . .	54
4.4 Lower Bound for the Stochastic Generalized Assignment Problem . . . . .	60
4.5 Improving Strategies . . . . .	60

---

4.6	Computational Results . . . . .	61
4.7	Conclusions . . . . .	67
<b>5</b>	<b>A Stochastic Location-Routing Problem</b>	<b>69</b>
5.1	Modeling Issues . . . . .	70
5.2	Heuristic for the Stochastic Location-Routing Problem . . . . .	74
5.3	Lower Bound for the Stochastic Location-Routing Problem . . . . .	77
5.4	Computational Results . . . . .	81
5.5	Conclusions . . . . .	86
<b>6</b>	<b>Conclusions and Future Research</b>	<b>87</b>
