The neighborhoods used to suffer the consequences of the plant's activities. However, since the plant stopped operating, such areas have become green spaces, offering new opportunities for the community. The park is designed to connect the two main towers, creating a new urban space.

The system of pedestrian walkways connects this newly natural space with the different new urban spaces produced by the city. It is a single action, defined by the possibilities of the space existing as a long-term use for the city's organization and for its landscapes complementation.

The grand metropolitan boulevard is an optimal version of what a promenade can be. It is a space for circulation when necessary and a gathering point when convenient. It expresses the high level of the territory. It will lose the sense of continuity between different city areas.
