PROGRAM DIAGRAM

MAKESPACE

Modern software, the Internet and economies of scale have all come together to allow ordinary people with a little bit of know-how to begin blurring the lines between manufacturer and consumer. With some effort and the help of a growing community of makers it is possible for a lone individual to make things of amazing quality and functionality. **Makerspaces that act as hubs for the maker community are popping up all over the world.** We may be on the verge of the 'Age of the Amateur.
