

Contents

- 1 Introduction** **4**
- 1.1 Goals of the thesis 4
- 1.2 Main difficulties in numerical simulation of incompressible flow problems 5
- 1.3 Drawbacks of some finite elements 5

- 2 General concepts** **7**
- 2.1 The Navier-Stokes equations 7
- 2.2 Stationary Stokes problem 9
 - 2.2.1 Strong form 9
 - 2.2.2 Weak form 9
 - 2.2.3 Galerkin formulation 10
 - 2.2.4 Matrix problem 11
 - 2.2.5 The LBB condition 12
 - 2.2.6 Stabilization of the stationary Stokes problem 13

- 3 Applications and numerical examples** **17**
- 3.1 Bidimensional case 17
 - 3.1.1 Problem with analytical solution 22
 - 3.1.2 Cavity flow problem 28
- 3.2 Tridimensional case 32
 - 3.2.1 Problem with analytical solution 38
 - 3.2.2 Cavity flow problem 51

- 4 Concluding remarks** **55**
- 4.1 Future lines of research 56

- 5 References** **57**
