Resumen	3
Abstract	4
1. Introduction and objectives	7
2. Discontinuous Galerkin methods for elasticity	9
2.1. Domain discretization	9
2.2. Governing form	10
2.3. Weak form of the problem	10
2.4. Consistency of the discontinuous Galerkin methods	14
2.5. Stability of the discontinuous Galerkin methods	15
3. Interior penalty method for elasticity	17
3.1. Weak form of interior penalty method	17
3.2. Consistency and conservation properties of interior penalty method	18
3.3. Symmetry of the bilinear form	19
3.4. Stability	19
3.5. Discretization of the weak form	20
3.6. Computer implementation	24
3.7. Elasticity examples	27
3.7.1. Error analysis theory	27
3.7.2. One dimensional example	28
3.7.3. Two dimensional example	34
4. Discontinuous Galerkin methods for elastoplasticity	39
4.1. Non-symmetric discontinuous Galerkin method	39
4.1.1. Weak form of non-symmetrical discontinuous Galerkin method	39
4.1.2. Spatial discretization of non-symmetric discontinuous Galerkin method	40
4.1.3. Linearization of non-symmetric discontinuous Galerkin method	40
4.2. Interior penalty method	45
4.2.1. Weak form of interior penalty Method	45
4.2.2. Spatial discretization of interior penalty method	47
4.2.3. Linearization of interior penalty method	47
4.3. Plasticity examples	50
4.3.1. One dimensional example	50
4.3.2. Two dimensional example	57

Contents

5. Conclusions	61
A. Average and jump operators	63
B. Discretization	65
C. Plasticity	67
C.1. Stress-strain relationship	67
C.2. Yield criterion	70
C.2.1. One dimension yield criterion	72
C.2.2. The von Mises yield criterion	72
D. Computational plasticity	75
D.1. One dimension case	75
D.2. Two dimension plane strain case using von Mises yield criterion	77
D.2.1. Consistent tangent modulus	80
