

SEVERO OCHOA RESEARCH SEMINAR LECTURES AT BSC

OPENING SESSION: November 2nd, 2016

NeCTAR - University of Melbourne

Lev Lafayette and Martin Paulo

University of Melbourne

Abstract

The presenters shared their experiences of running the NeCTAR, the largest academic and research cloud deployment in Australia.

They also presented an overview of the architecture, use, and the corresponding training programme as well as the recently developed new hybrid HPC and cloud system

which is cost-efficient, flexible, and encourages high-throughput, covering the general and specific elements of the system design, issues that were raised in implementation, and the future of the system

Short Bio

Lev Lafayette is the HPC and Training Officer for Research Platforms at the University of Melbourne. Prior to that, he worked at a similar role for several years at the Victorian Partnership for Advanced Computing.

Martin Paulo is the Research and Operations Engineer for Research Platforms at the University of Melbourne. Prior to that, he worked as a developer at the Victorian Partnership for Advanced Computing and the Victorian eResearch Initiative.
