WC VENTILATION

CTE HS 3 For the WC air quality we use an forced ventilation system using extraction fans 75 in bathrooms AREPRE with an extraction power of 95 m³/h (CTE Sink) up to 50m in length evacuation pipe (100)

These extraction fans will be in an intake plenum (2) and extend from the extraction point to the surface.

The evacuation of waste air will be using the groove of the gutter. This way we will not pierce the roof.
