**Appendix: analysis on hospitalizations,
ICUs, discharges and mortality for
countries and regions with available data**

IMPORTANT COMMENTS TO THIS APPENDIX:

- ✓ We have analysed dynamics and tendencies in hospitalizations, ICUs, discharges and deaths when data were available.
- ✓ **SPAIN:** Spain is revising temporal series of a few regions. In addition, some changes in data reporting protocols have been made. Both issues may temporally affect Spanish data and predictions. Therefore, detailed predictions for hospitalizations, ICUs and deaths will not be included for a couple of days.
- ✓ **ITALY:** data are available without specifying if hospitalizations and ICUs are cumulative or prevalence. They have been considered prevalence, since their dynamics seem to behave as so.
