Challenges to adapt library services to Horizon 2020
Benítez-Juan, Beatriz; García-Gomez, Consol.
BCBL: Baix Llobregat Campus Library. UPC. Castelldefels

Abstract
This poster will highlight the value that librarians can bring to help researchers in the Horizon 2020 scenario where it appears for the very first time instructions about Research Data Management (RDM).

There are services that are being rolled out for a while like advocacy for open access publication and others that are challenging due to mandates (within EU, national and institutional level) and copyright issues like research data. Some of these challenges regarding data curation that need to be considered from a librarian point of view in order to make data available and reusable:

• metadata
• advocacy for sharing data,
• support in licenses and copyright,
• how to deal with publishers who are already working with datasets
• the long-term preservation and archiving of the data

Framing the context
Horizon 2020 is the eighth phase of the Framework Programmes for Research and Technological Development, funding programmes created by the European Union in order to support and encourage research in the European Research Area. It implements Europe 2020 and Innovation Union strategies. The programme runs from 2014–2020 and provides an estimated €80 billion of funding. The programme consists of three main research areas that are called "pillars." The first pillar, "Excellent Science," focuses on basic science. The second pillar is "Leadership in enabling and industrial technologies." The third pillar funds potential solutions to social and economic problems, "Societal challenges". Horizon 2020 has supported Open Access Publication as a principle to scientific peer reviewed publications.

Horizon 2020 has implemented a pilot action on open access to research data limited to seven specific research areas. Participating projects will be required to develop a Data Management Plan (DMP), in which they will specify what data will be open. In Spain, its Science Law (Ley 14/2011, of 1 de junio, de la Ciencia, la Tecnología y la Innovación), on Article 37 about Open Access Diffusion, encourages researchers to deposit in an Open Access Repository the final version of contributions sent to journals. In our Institution, UPC researchers are encouraged to deposit in institutional repository an open version of their articles published in journals by 2015, if they want to be evaluated.

Horizon 2020 represent challenges in Library Services at least in two ways: Research data and Open Access

Open Access for Science Publications
Changes Library Services in:

Institutional Repository: Upcommons Eprints
More contents in Open Access
Can allow research data?
Current Research Information System (CRIS): DRAC
Emergence of data sharing leads the way for new methodology for research evaluation.

Bibliometrics: Altmetrics
Other bibliometric indexes can be studied such as number of downloads, likes, sharing in social networks... Reports provided regularly by the Library should consider them

Research Data
The Library should take over new responsibilities and duties if it wants to succeed and play a role in Horizon 2020.

Universities and research institutions, worried for the long term reservation and open access to research data are building data repositories but it is not easy to understand the new landscape of data repositories. Researchers, funding bodies, publishers and scholarly institutions struggle to select appropriate repositories for storage, search and reuse of research data. Re3data is very welcomed and could help to navigate.

Managed by DataCite is a global registry of research data repositories that covers research data repositories from different disciplines.

CBL Campus
What's the CBL researchers behavior with data?
Although by the time of preparation of this poster the CBL survey about researchers' behavior against data is not finished we can anticipate some results based on few responses that we have and on the responses of DATASEA project about research data management in Spain. Results from the 807 responses of DATASEA survey carried out in 2014 in Spain showed that:

50% legal issues
42% Possible misuse

Concerns about data sharing

Projects do not have a Data Management Plan (DPM)
Researchers keep their data on local computers

Researcher selection criteria at CBL:

Interview tips:
30 minutes Interview
Face to face
Deliver flyer with info about H2020 and data

What's next? What's needed?
Conclude the survey
Training for librarians
Advocacy for researchers about:
• Authorship & attribution
• Benefits to share data
• Legal issues, such as licenses and copyright
• Metadata & standards
• Archiving and preservation
• Reuse and mining

The library should plan to include information about RDM in all the training and information sessions for early researchers as well as faculty and help them to be compliant with Horizon 2020.

At a university level
Create a team to assist researchers with data related issues
Multidisciplinary backgrounds will enable communicating with researchers. The team should include librarian, IT people plus some early assistant able to understand the research being carried out at UPC.

At a national level
Sign manifestos such as The Hague declaration on knowledge discovery in the digital age, that promotes content mining and development of open access policies and infrastructure and give credit for data as is a valuable researcher output

Get used to these hot keywords:

Future Scenario
Deposit and citation making data discoverable
The Library will encourage researchers to deposit their datasets on data repositories emphasizing the ones that cover CBL subjects. Among them:

PANGAEA. Publishing Network for Geoscientific & Environmental Data. Most datasets are open; some are restricted.
DataONE includes data from fields such as ecology, biology, evolution, and environmental sciences such as hydrology, oceanography, and atmospheric science.
Astrophysics Data System. From the Smithsonian Astrophysical Observatory (SAAO) and National Aeronautics and Space Administration (NASA).
CiteseerX provides its databases of nearly 2 million documents and the associated texts and pdfs for research.

Zenodo. Zenodo was launched within the OpenAErius project as part of a European-wide research infrastructure. Developed and hosted by CERN.

Data citation will be a key issue since it means attribution and credit for reuse and repurpose of data. Standards are on the way. Datacite encourages research communities to develop citation systems that work well for them following:

0. Creator (Publication Year): Title. Version. Publisher. Resource Type. Identifier

For example:

End user training is basic to help spreading the word about data management. Data management plan infographic:
