SUSTAINABLE DEVELOPMENT. A conceptual and operative approach to sustainability principles for the construction sector

Víctor Manuel López-López
Civil Engineer

An English synopsis taken from the Spanish version of the Doctoral thesis
(a condition required for the award of the European Doctorate)

SUSTAINABLE DEVELOPMENT. A conceptual and operative approach to sustainability principles for the construction sector.

ENGLISH SYNOPSIS

Contents

Contents of the English synopsis ii
Contents of the original Spanish version of the thesis iii
Executive summary vii
Introduction xi

FIRST PART

THEORETICAL AND CONCEPTUAL FRAMEWORK OF SUSTAINABILITY 3
(chapter I and synopsis of chapters II and III).

SECOND PART

TECHNIQUES AND TOOLS USED IN SUPPORTING SUSTAINABILITY (synopsis of chapters IV and V) 33

THIRD PART

SUSTAINABLE CONSTRUCTION 45
(synopsis of chapters VI, VII, VIII and IX)

FOURTH PART

TOWARD SUSTAINABILITY MEASURING 77
(synopsis of chapters X, XI and XII).

FIFTH PART

COMPENDIUM OF THE APPROACH TO SUSTAINABILITY PRINCIPLES FOR THE CONSTRUCTION SECTOR 115
(synopsis of chapter XIII and epilogue)
COMPREHENSIVE CONTENT OF THE ORIGINAL SPANISH VERSION OF THE THESIS

Contents

Executive summary
List of figures and tables
Acknowledgments
Introduction

FIRST PART
THEORETICAL AND CONCEPTUAL FRAMEWORK OF SUSTAINABILITY

CHAPTER I. FRAMEWORK OF THE THESIS

1. Justification
2. Objectives
3. Goals
4. Hypothesis
5. Methodology
6. State of the art

CHAPTER II. SUSTAINABLE DEVELOPMENT, GENESIS AND EVOLUTION

1. Historical aspects
2. The Brundtland Report
3. The Earth Summit
4. Agenda 21
CHAPTER III. THE CONCEPTUAL AND OPERATIONAL DEBATE OF SUSTAINABLE DEVELOPMENT

1. Conceptualization
2. Sustainable Development definitions
3. From the interpretation to the operativeness of the sustainability
4. Weak Sustainability and Strong Sustainability

SECOND PART

TECHNIQUES AND TOOLS USED IN SUPPORTING SUSTAINABILITY

CHAPTER IV. THE THERMODYNAMIC ACTION OF ENVIRONMENT AND ITS SUSTAINABLE IMPLICATION

1. Energy and materials
2. The Entropy law
3. Entropy and life
4. Entropy and environment
5. Sustainable production and Sustainable Consumption

CHAPTER V. SUPPORT TOOLS FOR SUSTAINABILITY

1. Environment Impact Assessment
2. Sustainability indicators
3. Life-cycle Assessment
4. Standards ISO 14 000
5. Decision-making process
6. Economic life-cycle of the construction materials

THIRD PART

SUSTAINABLE CONSTRUCTION

CHAPTER VI. FUNDAMENTAL PREMISSES IN SUSTAINABLE CONSTRUCTION

1. Justification for Sustainable Construction of buildings through their environmental impacts
2. Concepts and basic approaches
3. Sustainability principles applied to the Construction Sector
CHAPTER VII. PLANNING AND DESIGNING FOR SUSTAINABLE CONSTRUCTION

1. Planning (pre-design)
2. Architectural design and facilities
3. Structural design

CHAPTER VIII. CONSTRUCTION PROCEDURE FOR BUILDINGS AND SELECTION OF BUILDING PRODUCTS AND MATERIALS

1. Choosing building products and materials taking into account Sustainability principles
2. Environmental characteristics for some construction materials commonly used in buildings
3. Life-cycle analysis and its usefulness for selecting building materials
4. Construction processes on site

CHAPTER IX. SETTING OUT SUSTAINABILITY PRINCIPLES TO OPERATE AND DISUSE BUILDINGS

1. Buildings operation and maintenance
2. Recycling building products and materials
3. Solid waste from buildings construction and demolition
4. Buildings deconstruction

FOURTH PART

TOWARD SUSTAINABILITY MEASURING

CHAPTER X. SETTING OUT A REGIONAL FRAMEWORK TO IDENTIFY SUSTAINABILITY INDICATORS

1. Selecting a real region case study
2. Selected region baseline
3. Minimal proposal for regional Sustainability indicators

CHAPTER XI. IDENTIFICATION OF SUSTAINABILITY INDICATORS IN A REGIONAL CONSTRUCTION SECTOR

1. Setting out Sustainability indicators
2. Developing Sustainability indicators
CHAPTER XII. EXPERIMENTAL VERIFICATION FOR SUSTAINABILITY INDICATORS IN SELECTING BUILDING MATERIALS–A CASE STUDY

1. A regional (northwestern Mexico) middle-class standard house
2. Choosing an appropriate assessment method for selecting standard house materials
3. Applying the chosen method
4. Output interpretation

FIFTH PART

COMPENDIUM OF THE APPROACH TO SUSTAINABILITY PRINCIPLES FOR THE CONSTRUCTION SECTOR

1. Hypothesis validity
2. Conclusions, comments, and recommendations
3. Main findings from the thesis

EPILOGUE

BIBLIOGRAPHY AND REFERENCES

APPENDICES:
A. Abbreviations, acronyms, and symbols
B. Glossary
C. Institutions and personnel contacted in the research phase
D. Miscellaneous
