

INDEX

	Pag.
1 Introduction	1
1.1 Precious Metals	4
1.2 Chemistry of Platinum Group Metal Separation	7
1.3 Metal Separation Techniques for the Platinum Group Metals	10
1.3.1 Precipitation	11
1.3.2 Distillation	12
1.3.3 Solvent Extraction	13
1.3.3.1 A Short Review on the Solvent Extraction of PGMs	14
1.3.4 Liquid Membranes	19
1.3.4.1 Supported Liquid Membranes (SLM)	19
1.3.4.2 Liquid Surfactant Membranes (LSM)	21
1.3.5 Solid-Liquid Extraction	22
1.3.5.1 Ion-Exchange	22
1.3.5.2 Chelating Resins	23
1.3.5.3 Biosorption	23
1.3.6 Impregnated Resins	24
2 Biosorption	27
2.1 Introduction	27
2.2 Experimental Procedure for Metals Sorption	29
2.2.1 Batch System	29
2.2.1.1 Obtaining Isotherms	29
2.2.1.2 Study of Sorption Kinetics	31
2.2.2 Dynamic Sorption	32
2.3 Desorption	33
2.4 The Mechanism of Metal Biosorption	34
2.5 Modelling	35
2.5.1 Sorption Isotherms	36
2.5.2 Sorption Kinetics	37
2.5.2.1 External Mass Transfer	40
2.5.2.2 Intraparticle Mass Transfer	42
2.5.2.3 Modelling of Breakthrough Curves	44
3 The Sorbents: Chitin, Chitosan and Derivatives	53
3.1 Structure of Chitin and Chitosan	53
3.2 Preparation of Chitosan	54
3.2.1 Purification of Chitin	54
3.2.2 Deacetylation of Chitin	55
3.3 Physicochemical Characteristics of Chitosan	56
3.3.1 Degree of N-acetylation	56
3.3.2 Molecular Weight	56
3.3.3 Solubility	57
3.3.4 Crystallinity	59

3.4 Derivatives of Chitosan and Complexant Properties	60
3.4.1 Introduction	60
3.4.2 Crosslinked Chitosan	61
3.4.3 Carboxylate Derivatives	64
Sulphur Derivatives	65
3.4.4 Phosphorous Derivatives	66
3.4.5 Acylation	67
3.4.6 Incorporation of Complementary Amine Functions	68
3.4.7 Other Derivatives	69
3.5 Different Treatments of Chitosan	69
3.5.1 Gel	69
3.5.2 Solution	70
3.5.3 Membrane	71
3.5.4 Beads	72
3.6 Review of Sorption of PGM on Chitosan	74
4 The Scope of this Work	77
5 Sorbents Used in this Work	81
5.1 Crosslinked Chitosan	81
5.2 Thiourea Derivative of Chitosan	81
5.3 Chitosan Gel Beads	82
5.4 Dried and Re-hydrated Beads	83
5.5 Saccharose Beads	84
5.6 Hydrogenated Chitosan Gel Beads	84
5.7 PEI-grafted Beads	84
5.8 Thiourea-grafted Beads	85
6 Analytical Techniques	87
6.1 Inductively Coupled Plasma	87
6.1.1 Advantages and Disadvantages	88
6.2 Ultraviolet and Visible Adsorption Spectroscopy	89
6.2.1 Instrumentation	90
6.3 Fourier Transform Infrared Spectroscopy	91
6.3.1 Physical Principles	91
6.3.2 Sample Preparation	92
6.3.3 FTIR Instrument	92
6.4 SEM-EDAX Analysis	95
6.4.1 Energy Dispersive X-ray Analysis	95
6.5 Environmental Scanning Electron Microscope	97
7 Results and Discussion	101
7.1 Pd Sorption on Glutaraldehyde-crosslinked Chitosan	101
7.1.1 Batch System	101
Dynamic System	103
7.2 Grafting of Thiourea on Chitosan for the Study of Pt and Pd Sorption	106
7.3 Gel Beads	106

7.3.1 Pt and Pd Sorption on Crosslinking Chitosan Gel Beads	106
7.3.2 Pt and Pd Sorption on PEI-grafted Chitosan Beads	109
7.3.3 Pt and Pd Sorption on Thiourea-grafted and Hydrogenated Chitosan Beads	110
7.3.4 Os, Ir, Rh, Ru and Re Sorption on Chitosan Beads	111
7.4 Desorption	112
8 Conclusions	115
9 References	119
