Economy

Economy—overview: Ethiopia remains one of the poorest and least developed countries in the world. Its economy is based on agriculture, which accounts for more than half of GDP, 90% of exports, and 80% of total employment; coffee generates 60% of export earnings. The agricultural sector suffers from frequent periods of drought, poor cultivation practices, and deterioration of internal security conditions. The manufacturing sector is heavily dependent on inputs from the agricultural sector. Over 90% of large-scale industry, but less than 10% of agriculture, is state-run. The government is considering selling off a portion of state-owned plants and is implementing reform measures that are gradually liberalizing the economy. A major medium-term problem is the improvement of roads, water supply, and other parts of an infrastructure badly neglected during years of civil strife.

People

Population: 6,841,695 (July 1998 est.)

note: this estimate was derived from an official census taken in 1987 by the Somali Government with the cooperation of the UN and the US Bureau of the Census; population estimates are updated year by year between census years by factoring growth rates into them and by taking account of refugee movements and of losses due to famine; lower estimates of Somalia's population in mid-1996 (on the order of 6.0 million to 6.5 million) have been made by aid and relief agencies, based on the number of persons being fed; population counting in Somalia is complicated by the large numbers of nomads and by refugee movements in response to famine and clan warfare

Flag description: light blue with a large white five-pointed star in the center; design based on the flag of the UN (Italian Somaliland was a UN trust territory)
Government—note: While chaos and clan fighting continue in most of Somalia, some orderly government has been established in the northern part. In May 1991, the elders of clans in former British Somaliland established the independent Republic of Somaliland, which, although not recognized by any government, maintains a stable existence, aided by the overwhelming dominance of the ruling clan and the economic infrastructure left behind by British, Russian and American military assistance programs.

Economy

Economy—overview: One of the world's poorest and least developed countries, Somalia has few resources. Moreover, much of the economy has been devastated by the civil war. Agriculture is the most important sector, with livestock accounting for about 40% of GDP and about 65% of export earnings. Nomads and semi-nomads, who are dependent upon livestock for their livelihood, make up a large portion of the population. Crop production generates only 10% of GDP and employs about 20% of the work force. After livestock, bananas are the principal export; sugar, sorghum, corn, and fish are products for the domestic market. The small industrial sector, based on the processing of agricultural products, accounts for less than 10% of GDP; most facilities have been shut down because of the civil strife. Moreover, ongoing civil disturbances in Mogadishu and outlying areas are interfering with any substantial economic advance.

Economy

**Economy—overview:** Since 1993, the government of Kenya has implemented a program of economic liberalization and reform. Steps have included the removal of import licensing and price controls, removal of foreign exchange controls, fiscal and monetary restraint, and reduction of the public sector through privatizing publicly owned companies and downsizing the civil service. With the support of the World Bank, IMF, and other donors, these reforms have led to a turnaround in economic performance following a period of negative growth in the early 1990s. Kenya's real GDP grew at 5% in 1995 and 4% in 1996, and inflation remained under control. Growth slowed in 1997. Political violence damaged the tourist industry, and the IMF allowed Kenya's Enhanced Structural Adjustment Program to lapse due to the government's failure to enact reform conditions and to adequately address public sector corruption. Moreover, El Nino rains destroyed crops and damaged an already crumbling infrastructure in 1997 and on into 1998. Long-term barriers to development include electricity shortages, the government's continued and inefficient dominance of key sectors, endemic corruption, and the country's high population growth rate.

Economy

Economy—overview: Uganda has substantial natural resources, including fertile soils, regular rainfall, and sizable mineral deposits of copper and cobalt. Agriculture is the most important sector of the economy, employing over 80% of the work force. Coffee is the major export crop and accounts for the bulk of export revenues. Since 1986, the government—with the support of foreign countries and international agencies—has acted to rehabilitate and stabilize the economy by undertaking currency reform, raising producer prices on export crops, increasing prices of petroleum products, and improving civil service wages. The policy changes are especially aimed at dampening inflation and boosting production and export earnings. In 1990-97, the economy turned in a solid performance based on: continued investment in the rehabilitation of infrastructure, improved incentives for production and exports, reduced inflation, gradually improved domestic security, and the return of exiled Indian-Ugandan entrepreneurs.

Introduction

Current issues: Following the outbreak of genocidal strife in Rwanda in April 1994 between Tutsi and Hutu factions, more than 2 million refugees fled to neighboring Burundi, Tanzania, Uganda, and Zaire, now called Democratic Republic of the Congo. According to the UN High Commission on Refugees, in 1996 and early 1997 nearly 1,300,000 Hutus returned to Rwanda; of these, 720,000 returned from Democratic Republic of the Congo, 480,000 from Tanzania, 88,000 from Burundi, and 10,000 from Uganda.

Economy—overview: Rwanda is a poor African nation that has suffered bitterly from ethnic-based civil war. The agricultural sector dominates the economy; coffee and tea normally make up 80%-90% of exports. The amount of fertile land is limited, however, and deforestation and soil erosion continue to reduce the production potential. Manufacturing focuses mainly on the processing of agricultural products. A structural adjustment program with the World Bank began in October 1990. Civil war in 1990 devastated wide areas, especially in the north, and displaced hundreds of thousands of people. A peace accord in mid-1993 temporarily ended most of the fighting, but resumption of large-scale violence and genocide in April 1994 in the capital city Kigali and elsewhere took 500,000 lives in that year alone and severely damaged already poor economic prospects. In 1994-96, peace was restored throughout much of the country. In 1996-97 most of the refugees who fled the war returned to Rwanda. Sketchy data suggest that GDP dropped 50% in 1994 and came back partially, by 25%, in 1995. Plentiful rains helped agriculture in 1996, and outside aid continued to support this desperately poor economy. The economy continues to face significant challenges in rehabilitating infrastructure, agriculture, health care facilities, and capital plant. Recovery of domestic production will proceed slowly.

A.1.6. BURUNDI

Introduction

Current issues: in a number of waves since October 1993, hundreds of thousands of refugees have fled the ethnic violence between the Hutu and Tutsi factions in Burundi and crossed into Rwanda, Tanzania, and Zaire (now called Democratic Republic of the Congo); since October 1996, an estimated 92,000 Hutu refugees have been forced to return to Burundi by Tutsi rebel forces in the Democratic Republic of the Congo, leaving an estimated 35,000 still dispersed there; in Burundi, the ethnic violence between the Hutus and the Tutsis continued in 1996, causing an additional 150,000 Hutus to flee to Tanzania, thus raising their numbers in that country to about 250,000

Economy

Economy—overview: Burundi is a landlocked, resource-poor country in an early stage of economic development. The economy is predominately agricultural with roughly 90% of the population dependent on subsistence agriculture. Its economic health depends on the coffee crop, which accounts for 80% of foreign exchange earnings. The ability to pay for imports therefore rests largely on the vagaries of the climate and the international coffee market. As part of its economic reform agenda, launched in February 1991 with IMF and World Bank support, Burundi is trying to diversify its agricultural exports, attract foreign investment in industry, and modernize government budgetary practices. Since October 1993 the nation has suffered from massive ethnic-based violence which has resulted in the death of perhaps 100,000 persons and the displacement of a million others. Foods, medicines, and electricity remain in short supply. An impoverished and disorganized government can hardly implement the needed reform programs.
